

METHOD AND APPARATUS FOR DISPLAYING VIDEO

ABSTRACT OF THE DISCLOSURE

A method and apparatus for displaying different presentations of program material allows various presentations of a DVD movie, for example, to be displayed on a display for a user's selection. The various presentations might involve different angles from which a user must select or different chapters from which a program should begin. The selection of a presentation is facilitated by displaying the various options on a single display such that the user can quickly choose which presentation to choose. Furthermore, audio is provided with chapter presentations to assist a user in selecting a chapter from where playback should be initiated.
